August 23rd, 2011

Mrs. Tamara Thorpe-Odom
Walter B. Howard Elementary School
1478 Route 20
New Lebanon, NY 12124

Dear Mrs. Thorpe-Odom,

This letter is regarding Victoria Lehtonen. I evaluated Victoria in my office on August 3rd, 2011. Victoria remains compromised due to Lyme disease, as well as babesiosis, bartonella, and mycoplasma pneumonae coinfections. Additionally, she is undergoing extensive treatment, supervised by Dr. Richard Horowitz, for these conditions, which is leaving her fatigued, with sleep disturbances, postural orthostatic tachycardia syndrome (POTS), headaches, and nausea. Her current prescription medications include: cefdinir, clarithromycin, probenecid, tinidazole, hydorxychloroquine, fludrocortisone, nystatin, fluconazole, and citalopram.

Victoria's energy levels have improved slightly but remain limited. Until I evaluate her again on November 21st, she has my permission to attend classes with her peers on a very limited basis, not more than one or two hours per day.

Victoria will continue to need assistance from the New Lebanon Central School District with a home tutor for two hours per day. This additional instruction should remain in the home setting and should be limited to two hours a day in one-hour aliquots with a 15 to 30 minute break between sessions. This instruction needs to remain in the home so that she can lie down and take rest breaks when needed. Due to sleep disturbances, her home-tutoring sessions should not be scheduled before 11:00 am. Over stressing Victoria at this point could lead to relapses and a return to complete homebound instruction.

I am certain that you are as concerned as I am for Victoria's health, welfare, and education. I am sure that together we can assist Victoria through this difficult period. Thank you for your cooperation and understanding in this matter.

Sincerely

Melanie Levitan, MD

Simon Holzapfel
Director of Studies
Darrow School
110 Darrow Road,
New Lebanon, NY 12125

Dear Mr. Holzapfel,

This letter is regarding Victoria Lehtonen. I evaluated Victoria in my office on August 3rd, 2011. Victoria remains compromised due to Lyme disease, as well as babesiosis, bartonella, and mycoplasma pneumonae coinfections. Additionally, she is undergoing extensive treatment, supervised by Dr. Richard Horowitz, for these conditions, which is leaving her fatigued, with sleep disturbances, postural orthostatic tachycardia syndrome (POTS), headaches, and nausea. Her current prescription medications include: cefdinir, clarithromycin, probenecid, tinidazole, hydorxychloroquine, fludrocortisone, nystatin, fluconazole, and citalopram.

Victoria's energy levels have improved slightly but remain limited. Until I evaluate her again on November 21st, she has my permission to attend classes with her peers on a very limited basis, not more than one or two hours per day. It is my understanding that one of these classes will be Earth Sciences, which will include periods of outdoor class time. Victoria has my permission to attend these outdoor class periods as well. In order to avoid tick exposure and possible reinfection, I am requesting that she not be asked to walk through high grass or brush during her outdoor class time.

Victoria will continue to need assistance from the New Lebanon Central School District with a home tutor for two hours per day.

I am certain that you are as concerned as I am for Victoria's health, welfare, and education. I am sure that together we can assist Victoria through this difficult period. Thank you for your cooperation and understanding in this matter.

Sincerely

Melanie Levitan MD
